

Sabir BERTIT

Senior Python Backend Engineer

Python backend developer for ten years, and still a little too excited by a nicely written piece of code. I build web applications where maintainability, testability and clean separation of concerns are real priorities, not just words on a slide. The goal: software as dependable as a strong espresso on a Monday morning, and easy to change when the business does.

Technical Skills

- **Python & Backend**
  - Python
  - FastAPI
  - Django
  - Django REST Framework
  - Flask
  - SQLAlchemy
  - SQLModel
  - Alembic
  - Celery
  - Faust-streaming
  - Pandas
  - GeoPandas
  - Numpy
  - REST API
- **Data & Storage**
  - Databases: PostgreSQL, MySQL, Oracle, Redis
  - Storage: S3, MinIO
- **Tools**
  - Version control: Git
  - Static analysis: ruff, mypy, bandit, isort, black, pre-commit
  - Dependencies & environments: uv, pyenv, pipx, poetry
- **Infrastructure & CI/CD**
  - Containers: Docker, Podman
  - Web servers: Gunicorn, Nginx
  - Message brokers: Kafka, RabbitMQ
  - AuthN/AuthZ: Keycloak, Okta, Auth0
  - Reverse proxies: Traefik, Nginx
  - CI/CD: GitHub, GitLab, Azure DevOps
  - Cloud: AWS, Azure
- **Orchestration & Automation**
  - Prefect
  - Celery
  - BPMN
- **Architecture & Code Structure**
  - MVC/MVT
  - Clean and Hexagonal Architectures
  - Microservices
  - Event-Driven
  - Test-Driven Development (TDD)
  - Domain-Driven Design (DDD)
- **Testing & Quality**
  - Libraries: pytest, unittest
  - Unit, integration and E2E tests
- **Profiling**
  - Scalene
  - cProfile
  - Pyinstrument
- **Agile Methodologies**
  - Agile
  - Scrum
  - Kanban

Education

Engineering Degree — Computer Science & Software Development
Faculté des Sciences et Techniques Gueliz — 2012 - 2015 — Marrakech, Morocco

DEUG — Applied Mathematics
Faculté des Sciences, Université Ibn Zohr — 2010 - 2012 — Agadir, Morocco

Baccalauréat — Applied Mathematics
Lycée El Massira El Khadra — 2010 - 2012 — Tiznit, Morocco

Professional Experience

FNCCR — ACTEE
Public Sector · Energy

Paris
France

05/2026 - Present — *Senior Python Backend Engineer*

- **Lauréat V2:** FastAPI backend of the platform French local authorities use to manage energy-renovation projects funded by ACTEE: folders, actions, agents, indicators and access rights.
- **Integrations:** ProConnect sign-in (the French State's OIDC login for public-sector staff), from the first redirect to account linking. IPPER buildings reference behind a Redis cache. JSONLogic rules checked on the server for dynamic forms and automatic statuses.
- **Code health:** faster search with PostgreSQL trigram indexes; wrote the roadmap toward ports and adapters and had CI enforce its import rules; set up a QA regression suite that must pass before any merge.

Hexagonal Architecture; Python; FastAPI; SQLModel; Alembic; PostgreSQL; Redis; S3; OIDC (ProConnect); JSONLogic; Angular; Docker; Scalingo; GitHub Actions; uv; Ruff; Playwright.

Direct Assurance
Insurance

Suresnes
France

09/2025 - 04/2026 — *Senior Software Engineer*

- **Pricing APIs:** added features to the Auto, Health and Home insurance microservices and improved the REST APIs that serve prices.
- **Testing and performance:** wrote and maintained unit, integration and load tests; profiled hot paths with cProfile and yappi, and added OpenTelemetry tracing.
- **Teamwork:** worked day to day with actuaries, QA and DevOps to track down bugs and slow spots; took part in code reviews and documentation.

Microservices; Graph theory; Python; FastAPI; Ruff; uv; Pre-commit; Azure DevOps; Databricks; Docker; Podman; Azure Cloud; Concurrency; Profiling.

Axione
FTTH · FTTE · Geo Data · GIS

Malakoff
France

07/2022 - 06/2025 — *Backend Developer*

- Built several applications from scratch and saw them through every stage: planning, design, development, tests, deployment and maintenance.
- **File transfers:** automated NAS-to-FTP transfers on an event-driven setup (Kafka), with MFT orchestration and client notifications.
- **GRACE THD V3 processing:** FastAPI service orchestrated by Prefect that checks geospatial data (Pandas/GeoPandas), generates the optical network components (OSP, ISP, splices) and stores them on S3.
- **Geospatial ETL:** syncs several Oracle databases into a central one in parallel (multiprocessing/multithreading), with Redis caching and automatic projection detection.
- **Team standards:** hexagonal and clean architecture, SOLID, conventions shared across teams, pre-commit hooks (Ruff, Mypy, Bandit, PyUpgrade, GitLeaks), uv, pyenv and pipx.

Hexagonal and Clean Architectures; Python 2 and 3; SQL; Ruff; uv; Pyenv; Pipx; Pre-commit; Mypy; Bandit; Isort; Object Storage (MFT, S3, MinIO); Kafka; RDBMS (MySQL, SQLite, PostgreSQL); Redis; Keycloak; Traefik; Docker; Django; DRF; FastAPI; Concurrency; Parallelism; Faust; GitLab; Ubuntu; Fedora; macOS.

Baracoda Health IoT

Neuilly-sur-Seine
France

03/2022 - 07/2022 *Backend Developer*

- Built the BLE/Wi-Fi communication modules between connected medical devices and the mobile app (Python, MQTT)
- Synced medical data with cloud health platforms through their REST APIs
- Built a Django REST API to manage and follow patients' health data
- Moved the ORM layer from Django ORM to SQLAlchemy/Alembic
- Wrote the API contracts that kept services interoperable and data consistent
- Unit and integration tests with pytest; code reviews grounded in SOLID and clean code

MVT; Python 3.6; AWS; Alibaba; Kubernetes; Django; DRF; GitHub; Pylint; Bandit; Isort; Black; Asyncio; Redis; SQL; PostgreSQL; FastAPI.

Chronopost Express Delivery Logistics

Paris
France

06/2019 - 12/2021 *Backend Developer*

- Developed and maintained TETHYS, Chronopost's customs clearance tool (Django, DRF)
- Mapped the parcel lifecycle rules and reverse-engineered the legacy application
- Built the returns workflow and the modules that talk to French Customs
- Asynchronous file exchanges with Customs through Celery and RabbitMQ
- Dockerized the project and ran staging and production releases with Git Flow
- Unit tests during development, functional tests on the dev and staging servers

Django; DRF; Celery; Python 3; SQL; PostgreSQL; Nginx; Gunicorn; Redis; RabbitMQ; Docker; Git Flow; Supervisor; Ubuntu; Windows.

Conexcap Technologies Finance

Marrakech
Morocco

10/2017 - 04/2019 *Full Stack Developer*

- Designed and set up single sign-on across the 570 EASI group's platforms
- Secured the exchanges and kept the shared database centralized and in sync
- Built the REST APIs of FairInvest, a platform for subscribing to SCPI real-estate funds
- Forms, validation rules and client document management
- Celery tasks and Django signals to recompute client document data in the server cache
- Unit and functional tests on both projects; mentored junior developers
- Docker deployments, Nginx and Jenkins CI setup

Django; Django REST Framework; Laravel; Python; JavaScript; jQuery; Bootstrap; HTML; CSS; MySQL; Nginx; Gunicorn; Jenkins; Docker; Ubuntu Server; macOS.

Trans4orient Translation

Marrakech
Morocco

01/2016 - 10/2017 *Full Stack Developer*

- Built Twork, a Django ERP for a translation company covering projects, HR and billing
- Domain analysis, technical documentation and release planning in an Agile setup
- Bulk task proposals emailed to subcontractors, sent asynchronously with Celery
- Periodic Celery task that computed in-house availability and warned project managers
- Subcontractor portal with its own workspace and account management
- Billing module and activity dashboard

Django; Python 2 and 3; Pascal; JavaScript; jQuery; Ajax; HTML; CSS; Bootstrap; MySQL; Apache; Ubuntu; Windows.
